

TOP TIPS FOR MAXIMUM SAVINGS

Adapted from training materials by Landry's Corporation

#6 – Management must be fully involved in setting expectations and in providing training, including frequent reminders during the first 2 weeks.

#5 – Empty the trash can before it gets so full that the tray won't rotate. A separate trash can with a bag already fitted should be on hand for a quick swap during busy shifts.

#4 - The tray should be flipped after every use, if possible, so the food scraps don't accumulate on the tray. This makes it easier to see valuable items.

#3 – Never leave the tray in the vertical position after use. The tray must be returned to the horizontal position so the next user doesn't dump everything directly into the trash can.

#2 – Never leave a 2nd, unprotected trash can near the FlatwareSaver. A spare, bagged trash can should be available for a quick swap when the bag under the FlatwareSaver is full, but the spare can should be too inconvenient for the servers to use before the swap is made.

#1 - Always look to see what's on the tray before flipping it and sending the waste in to the trash can.
